

This bulletin is in reference to the use of psychedelics as a form of medical treatment.

There are currently **no** approved psychedelic-assisted therapies in the US. Microdosing (LSD, psilocybin, peyote, etc.) is illegal.

The Drug and Alcohol Committee strongly advises employees to seek advice from Aviation Medical Advisory Service (AMAS) at (866) 237-6633 if a healthcare professional prescribes or recommends psychedelic-assisted treatments. Any discovered use of these treatments may be grounds for termination.

If there are any questions about this bulletin, please contact your Regional Vice President for further information.
